RV AQUAJET
POTABLE WATER PUMP

Aquatec

INTERMITTENT DUTY MOTOR. ALL WETTED PARTS ARE MADE OF
WETTED MATERIALS. DO NOT USE WITH FLAMMABLE LIQUIDS.

OPEN FLOW 5.3 GPM SWITCH 65 PSI
VOLTAGE 12.0 @ 65 PSI
AMPS 10.0 @ 65 PSI
USE NUMBER

Aquajet RV Series

After three years in development, Aquatec Water Systems of Irvine, California is proud to introduce the new Aquajet RV Series. This revolutionary pump employs state-of-the-art electronics to automatically control motor speed – the pump actually adjusts its speed as you open and close water fixtures. The Aquajet RV's exclusive soft start feature eliminates annoying rapid cycling, and its exclusive 5-valve design can deliver twice the flow and pressure of conventional RV industry pumps.

Take the lead from top manufacturers like Fleetwood American Coach, Monaco Coach, Beaver Motor Coaches, Country Coach and Gulf Stream. They are currently benefitting from the unmatched performance of the Aquajet RV – now standard equipment in their high-end product offerings.

Benefits of the Aquajet RV

▲ Greater flow

Aquatec's patent pending 5-chamber design displaces substantially more water per motor revolution than typical 3- and 4-chamber models currently used in the RV industry. Aquajet RV is the highest-flow diaphragm pump available today.

▲ Higher pressure

The new Aquajet RV pump overcomes the pressure drops caused by today's sophisticated filtration systems and extensive plumbing systems.

▲ Silent operation

At performance levels similar to competitive pumps, the Aquajet RV will be as much as 90% quieter. This dramatic noise reduction is accomplished through slower speed and superior hydraulic energy transmission.

▲ Smoother flow

Aquatec's patent pending 5-chamber construction minimizes pulsation found in conventional diaphragm pumps.

▲ No rapid cycling

Aquatec's patent pending variable speed controller and soft start feature eliminate most of the rapid cycling noise typical of conventional pumps.

▲ Longer switch life

The Aquajet's proprietary electronic control circuit and integral pressure switch minimize switch arcing during starts and stops.

▲ Easy installation

Aquatec's universal mounting option allows easy retrofits for virtual plug-and-play performance.

The Aquajet RV Series. *Finally* – an RV water system that functions *just like at home.*

The Aquatec commitment

Since 1986, Aquatec has been committed to manufacturing excellence by adhering to stringent production standards and rigorous quality inspection procedures. This ongoing commitment to quality is reflected in every product we sell, and makes us confident our products will satisfy the demands of the most discerning customer.
